

# Wireframes For Mobile

## Prototype mid-fidelity

Niamh Aughney

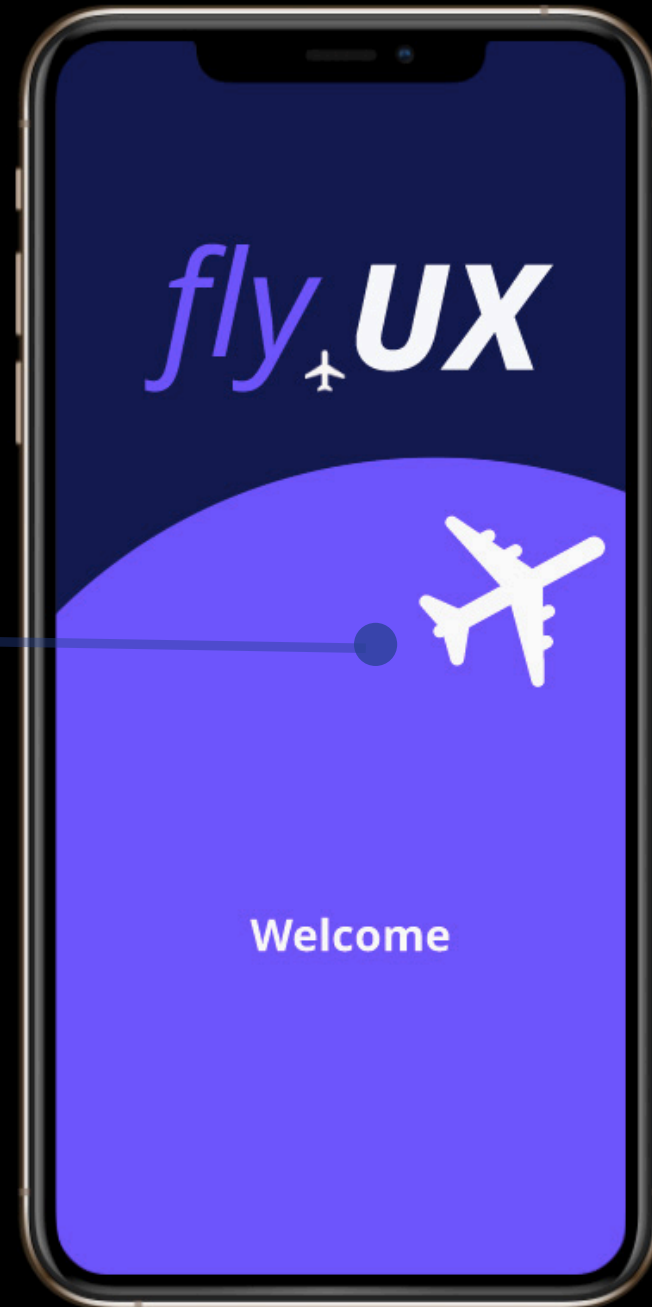

# Intro Screen

## RULES

Animation of the plane icon moving from bottom left to top right.

## FEEDBACK

Time delay 800ms and fades to Homepage as next screen.

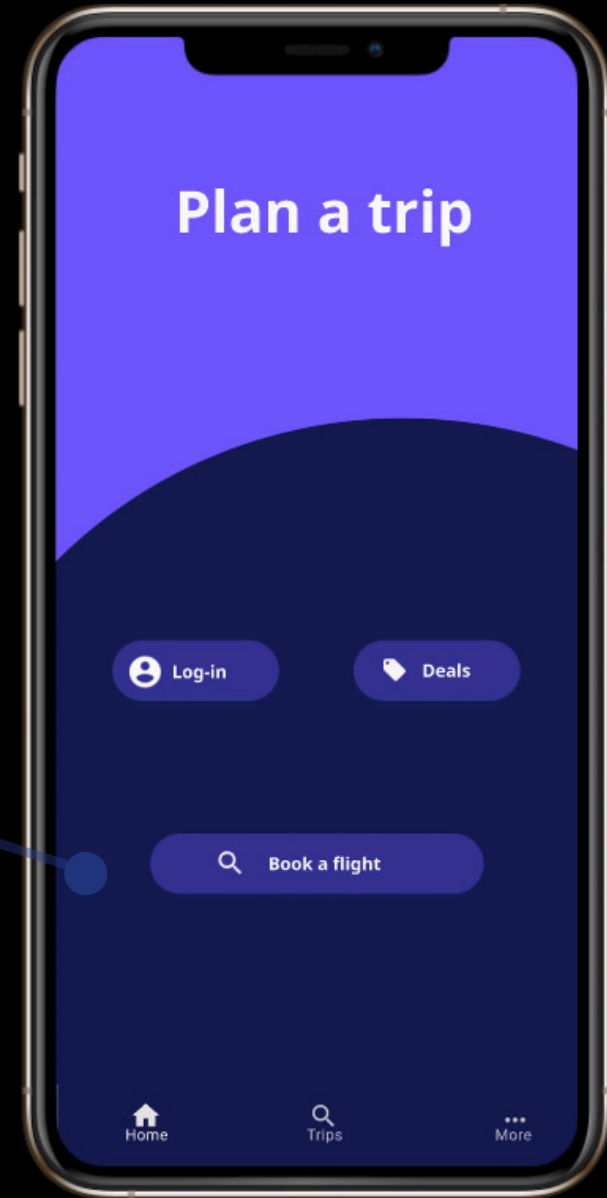

# Home Screen

## RULES

“Book A Flight” CTA is more prominent than any other button on the homepage. The positioning of this button is closer to the users thumb rather than “Log-In” or “Deals”.

## FEEDBACK

Lighter transparency from 100% to 38% and button increases size by 5px width and height before redirecting to flight search page.

# Flight Search Screen

## RULES

Homepage but can also click Home Button from navigation bar

## FEEDBACK

Will direct instantly back to home page on tap

## RULES

Tap "More to add?"

## FEEDBACK

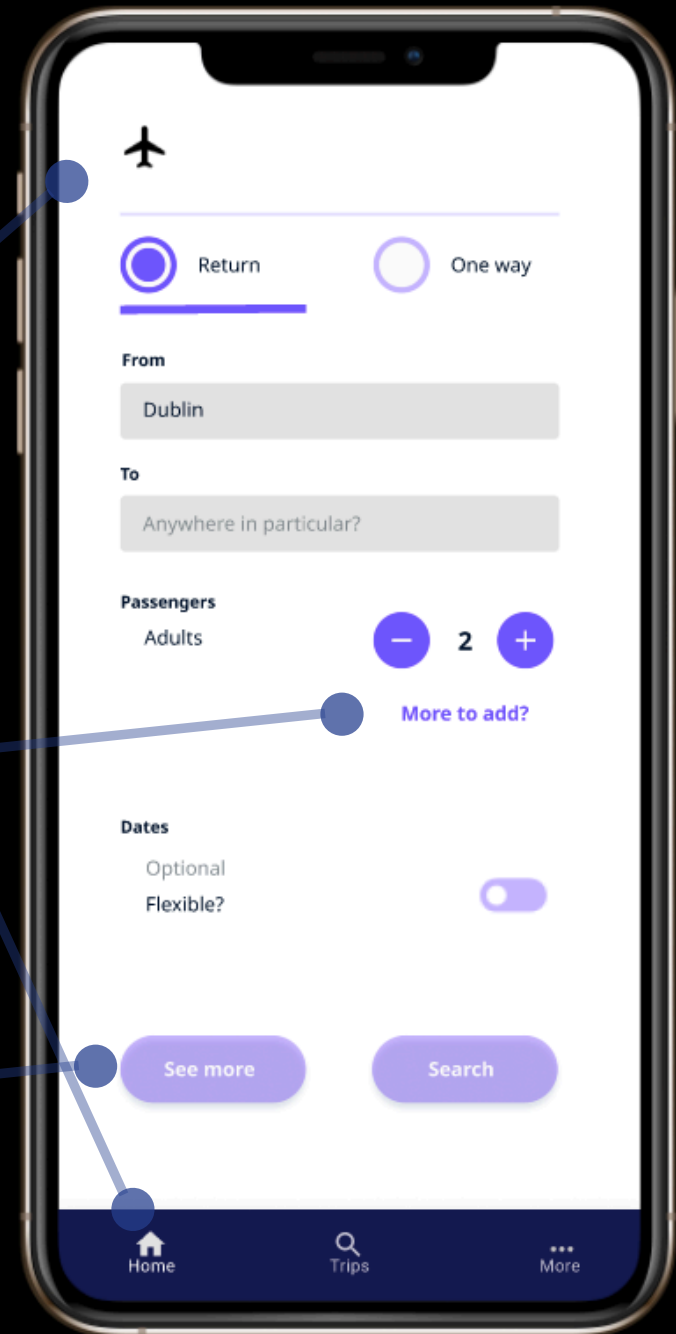

Brings to another screen to add other passengers for example children etc

## RULES

Tap "See more"

## FEEDBACK

Brings up screen with adding baggage and add-ons.

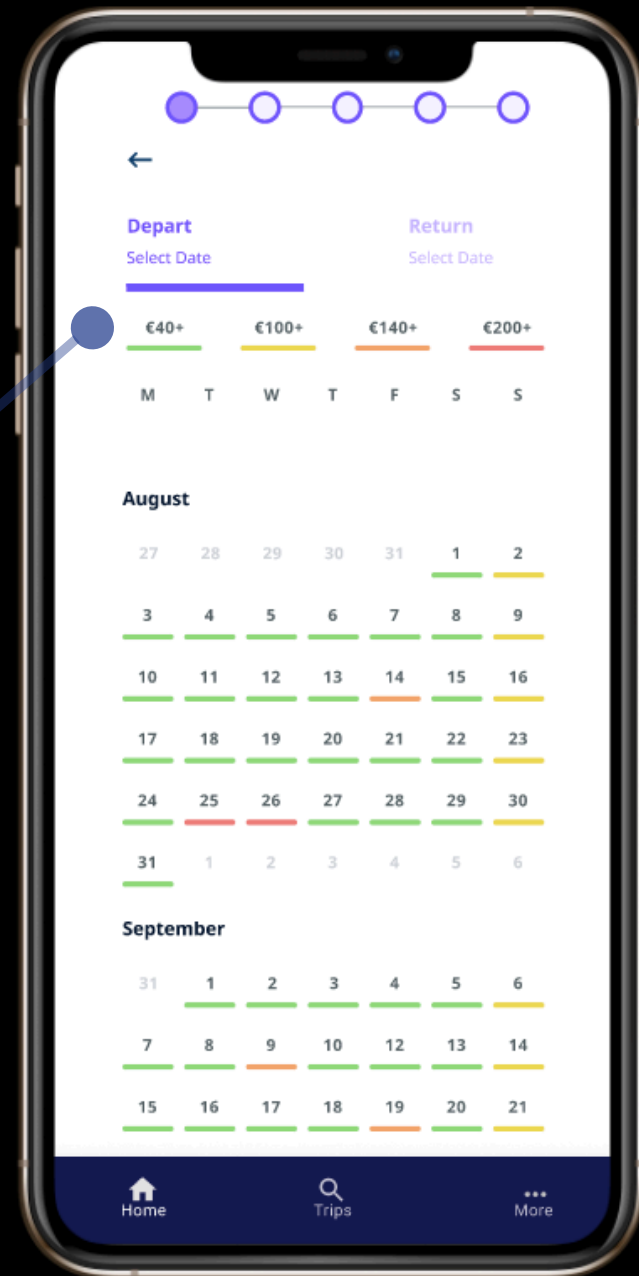

# Flight Search Screen

## RULES

Return is not as visible as Depart when selecting outbound flight.

## FEEDBACK

Once date is selected for outbound flight, return will look the same as depart.

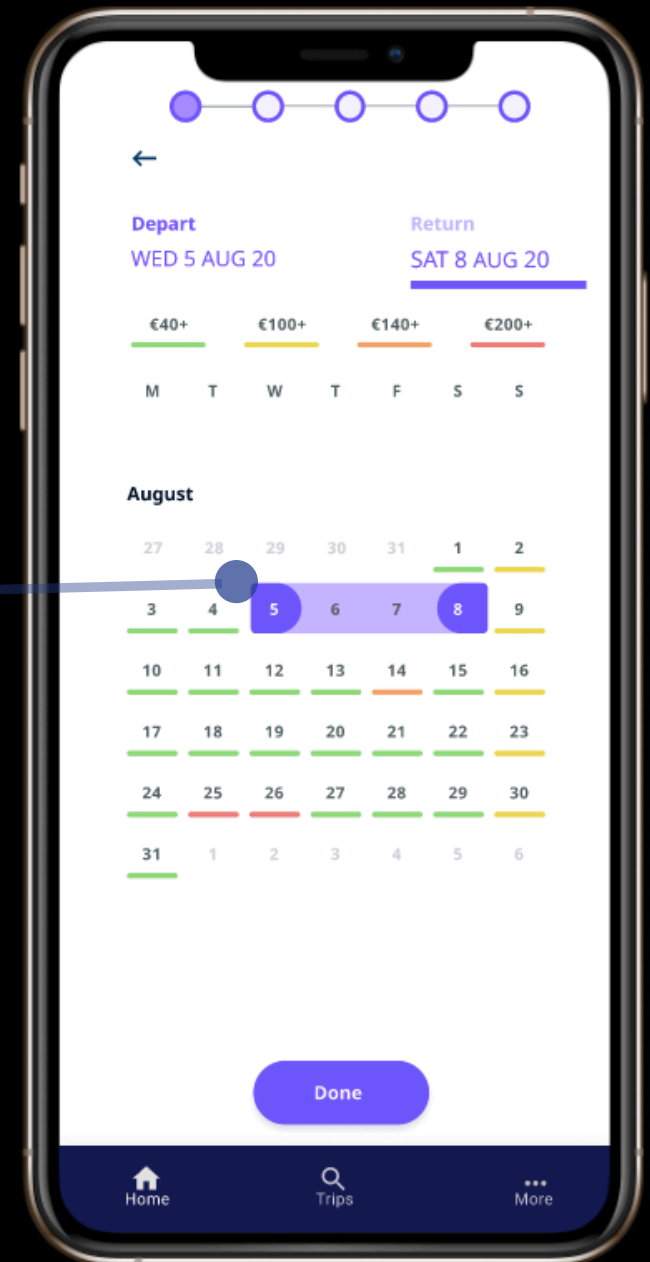

# Flight Search Screen

## RULES

Input both depart and return dates

## FEEDBACK

Done CTA appears once both selections are complete

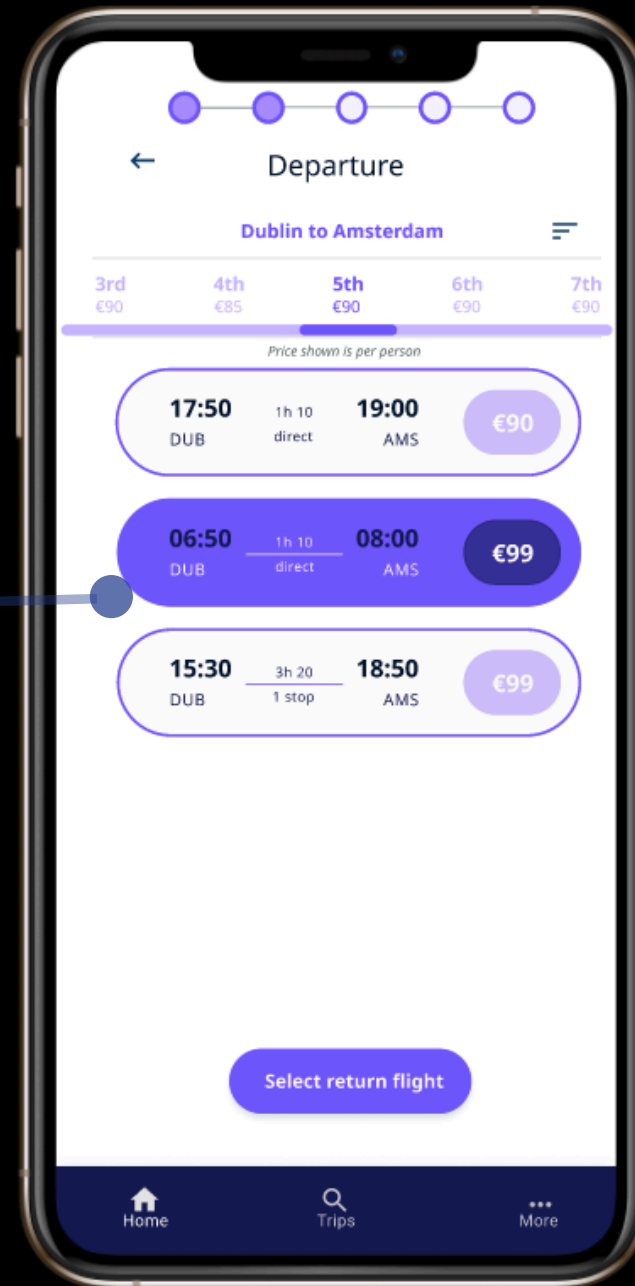

# Flight Search Screen

## RULES

Input both depart dates

## FEEDBACK

Select return flight appears once selection is complete

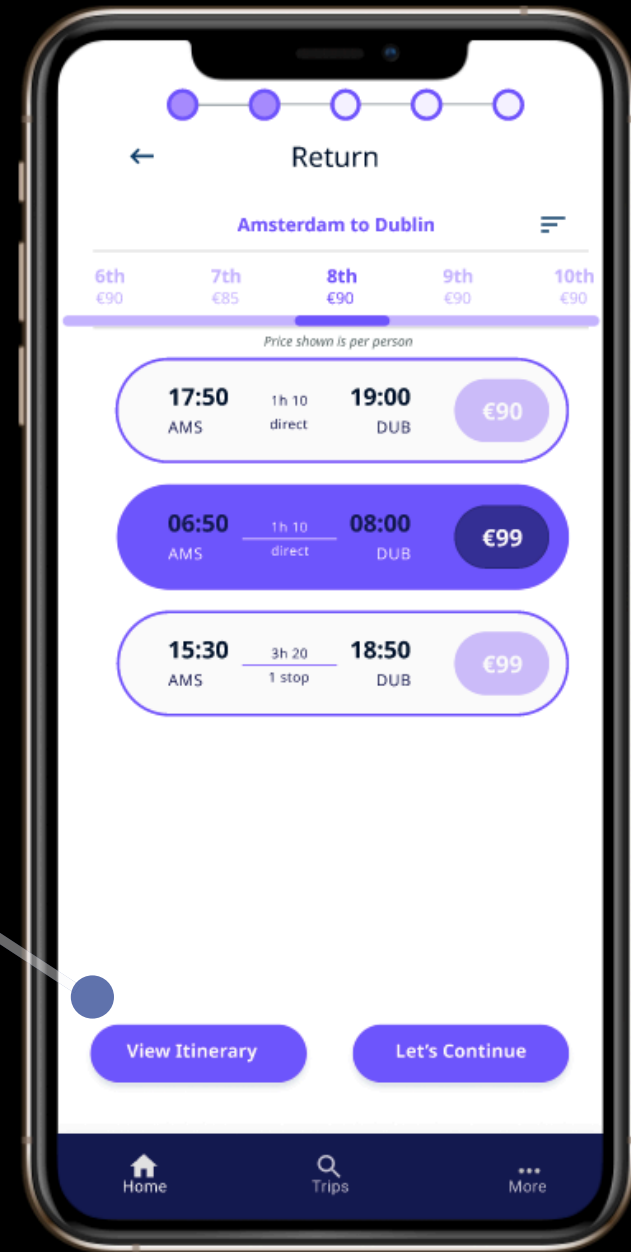

# Flight Search Screen

## RULES

Tap View Itinerary

## FEEDBACK

Brings up the page Itinerary to confirm selection before proceeding to pay

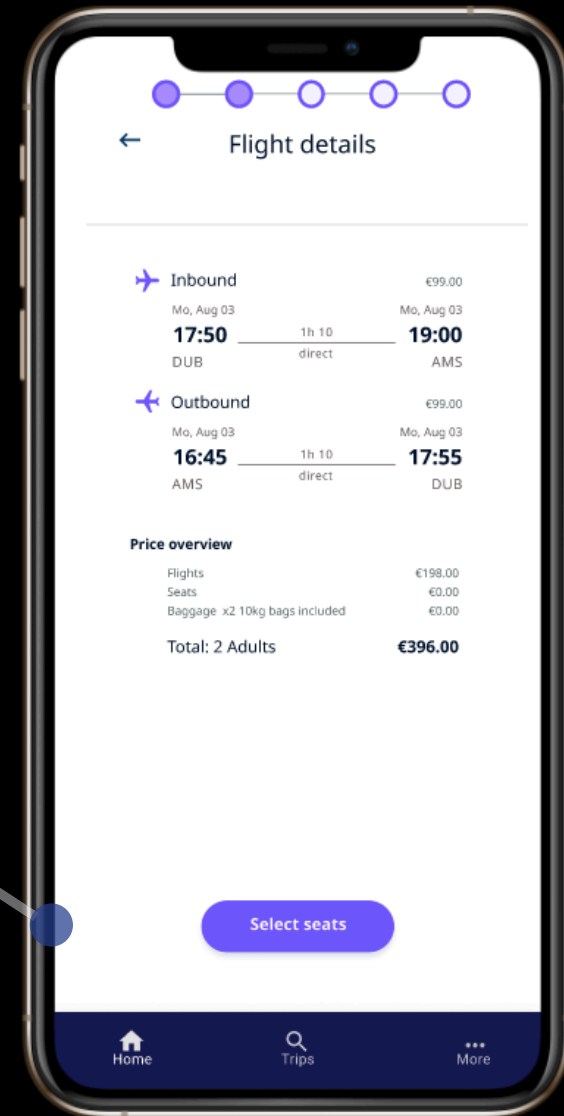

# Itinerary Screen

## RULES

Itinerary screen

## FEEDBACK

Brings up the page Itinerary to confirm selection before proceeding to pay

# Passenger Details Screen

## RULES

Passenger details screen

## FEEDBACK

Add in personal info, finalise payment appears

← Passenger details

Adult no. 1 *booker*

Finalise Payment

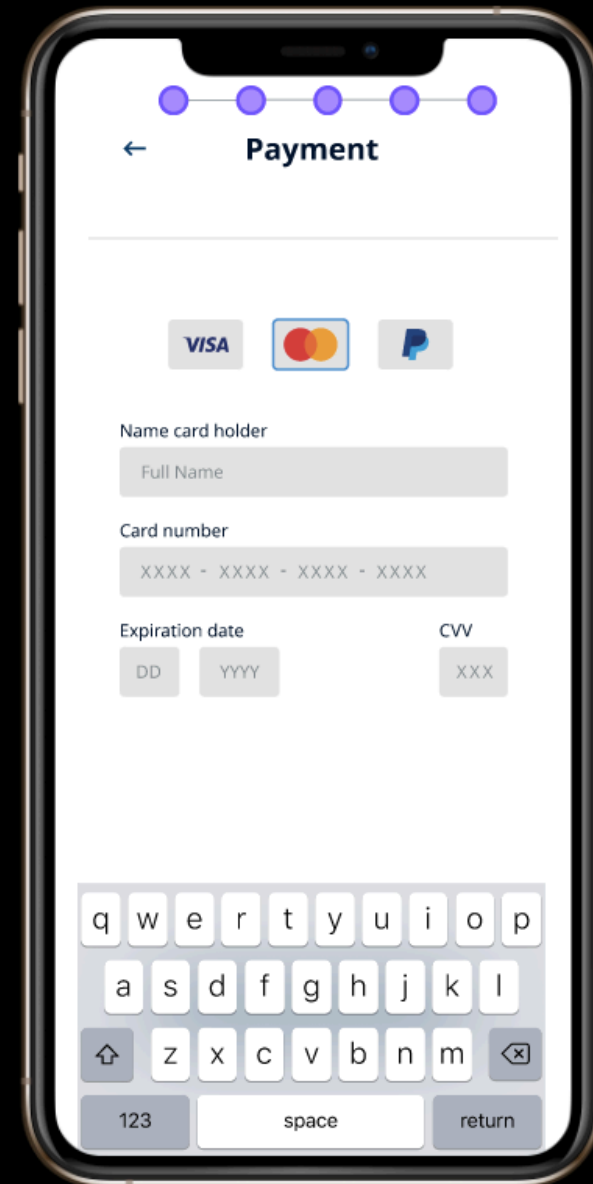

# Payment Screen

## RULES

Input personal card details

## FEEDBACK

Brings up the confirmation screen

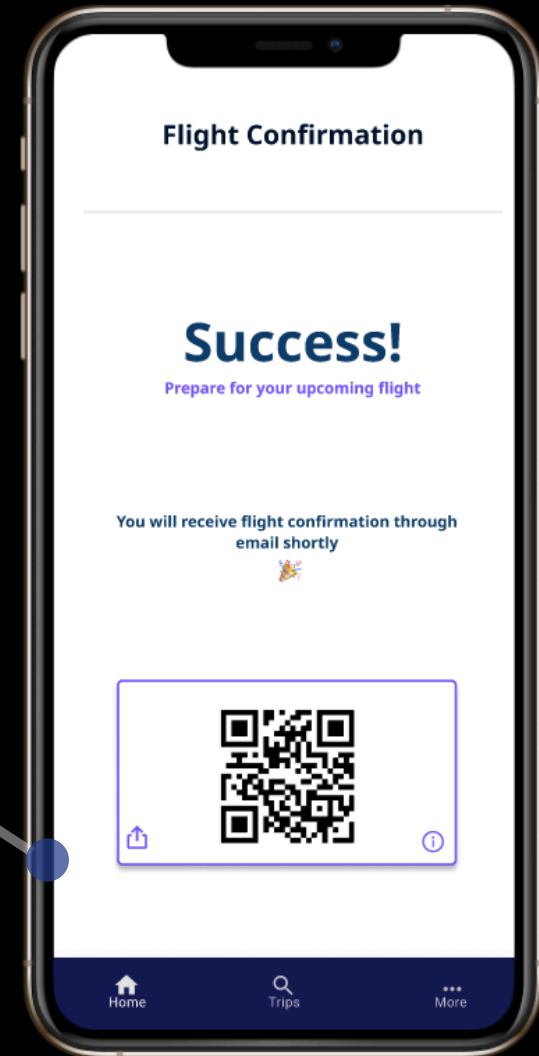

# Confirmation Screen

## RULES

Flight Confirmation screen

## FEEDBACK

Can share the flight information

# Overview

Wireframing is key to communicating the initial prototype to web developers. Just before wireframing it is important to test and iterate the animations to make sure your design solves a problem.

I used Figma to create my prototype.

The main goal was to ensure the navigation flows easily.

This medium-fidelity mockup is a combination of iterations based on my findings.

Go raibh maith agat!

-THANK YOU!
